

METHOD FOR MANUFACTURING 3D IMAGE DISPLAY BODY

ABSTRACT

5 The present invention provides a method for manufacturing a 3D image display body which is used to display 3D images in which right-eye image display parts *a* and left-eye image display parts *b* are mixed, this method a phase-difference film is disposed on a transparent support with an adhesive agent interposed. Resist members that are made transparent and need not be removed are then disposed in specified positions on the aforementioned phase-difference
10 film. The phase-difference function of the portions of the phase-difference film on which the aforementioned resist members are not present is eliminated by an appropriate means. A display member is superimposed or bonded on the side of the resist members 4 following drying.
